Type of Operation: Cafo - Commercial Animal Feeding C

County: Maricopa

Description of Complaint:

Complaint about the horrible stench spilling from this operation and the trucks traveling on 411th Ave to Hickman's are not observing the posted speed limits of 45 mph and 35 mph. Trucks traveling so fast that the filth inside the trucks are spilling out onto the nearby residential area. These trucks should be washed weekly to eliminate the spreading of the bird/manure particulates. Also the haul trucks don't need to be blowing their horns when they see residents walking along the roadside.

Type of Operation: Cafo - Commercial Animal Feeding C

County: Maricopa

Description of Complaint:

When I was heading east on Salome Rd. I happened to be behind semi manure truck heading from Tonopah to the Arlington Hickman farm. Followed for awhile until I could not stand the smell. Feathers were continuously flying out the back of the truck. The feathers were off white looking soiled by the manure. Some seemed to be stuck together in clusters. I will be carrying my camera with me from now on. Also it is still raining micro-feathers at my house.

Date of Occurrence: 01/22/15 Substance Involved: feathers and chicken poop

Quantity of Substance: continuous flow of feathers bl Medium Affected: Hazardous Waste

Best Time to Witness: When manure trucks are transporting manure Verifying Documentation:

Type of Operation: Cafo - Commercial Animal Feeding C

County: Maricopa

Description of Complaint:

On 1/21/15, the wind was blowing to the west and I could smell a strong odor coming into my house. I went to the front door and stepped out, and it smelled like I was living right next door to a stockyard. The odor was very pungent and acrid. The next few days it could be smelled, but less strong. On 1/25/15, the air was calm, but I could smell a bad odor all day when I was outside my house. I am out of the prevailing winds from it although I do live near their facility. Also, on 11/6/14, feathers and chicken manure were all over sides of the road and in the roadway in front of the Hickman Desert Pride Farms Chicken/Egg Factory, and were strewn all of the way to Tonopah's commercial area and through it on Indian School Road and 411th Avenue. I picked up some of the feathers and took some photos of manure all over the roadway. They were falling or blowing from the trucks as chickens were being hauled to the Chicken/Egg Factory buildings. Also, the odor from their facility could be smelled all of the way from there to the Tonopah commercial area about 1/2 mile away.

Date of Occurrence: 01/21/15

Substance Involved: Odor

Quantity of Substance: Bad

Medium Affected: Air

Best Time to Witness: On and Off, mostly as wind shifts

Type of Operation: Cafo - Commercial Animal Feeding C

County: Maricopa

Description of Complaint:

Feathers and dander particulates are raining down on my property. Damaging particulates on vehicles etc.. Leaving hard water deposits on vehicles and home due to high pH composites, causing damaging HARD WATER DEPOSITS on vehicle finishes, not to mention health issues due to these high pH deposits on property. This health and environment hazard is mentioned in the USDA Part 651 Agricultural Waste Management Field Handbook, Chapter 2 " Planning Considerations". I believe that the planners of this CAFO did not do their homework since they figured the county and state would back them up. Their processes and bi-waste products are trespassing on my property and are not letting me enjoy my right to enjoy my property as stated in the US constitution. There are times when I will step out of my house and my breath is taken away due to the pungent stench of my new neighbor. I also believe Hickmans are not protected as a nuisance under the Arizona Right to Farm Act since zoning in this state is not enough to protect them and I was here first. This farm was a crop operation which I do not consider a nuisance. The extreme change of operation to a CAFO on this farm, I believe, is illegal.

Description of Complaint:

When driving past the egg factory about 3:27pm today I noticed a stink, smelling similar to wet chickens. It was nauseating ! When I returned to that area around 6:30pm the stink was still there, and I could still smell it when I went into the restaurant for dinner. This horrible odor does not make me want to eat anywhere near this area. In order to do their type of business the Hickman Egg Ranch had to get an air quality permit, and also COMPLY with that permit. They ARE VIOLATING the first condition of that air pollution permit # 140062, and they should be made to come into compliance, or else stop their business until they DO come into compliance. I want a COMPLAINT NUMBER ASSIGNED TO MY COMPLAINT. and I want to be notified of that number. Thank you

Date of Occurrence: 02/27/15 **Substance Involved:** stink of wet chickens and manu

Quantity of Substance: Unknown **Medium Affected:** Air - Agriculture

Description of Complaint:

Besides the numerous flies, there is dander and tiny feathers raining down on my property. Some feathers look like tiny feathers while others look like fuzzy hairs. Just washed my car a couple of days ago and it is back to being covered with white specks of dust and feathers. While outside I can see these feathers coming down from above. I blame the vent fans from these chicken barns for this feather and dander dust fallout. Hickman's Egg Ranch is violating the first condition of it's air pollution permit, permit # 140062. I do not want these feathers trespassing on my property, they are a nuisance. I believe I get itchy due to the tiny feathers landing on me. I breath, wear and probably am eating this junk. I am still waiting to hear from two other complaints I have filed.

Description of Complaint:

Hickman Egg Ranch is violating the first condition of its air pollution permit, permit number 140062. Traveling east on Indian School Rd picked up the strong odor of Hickman's; I was west of their west service entrance. The offensive odor remained in the air all the way to the Shell station on 411th Ave(my stopping point) and 20 min later when returning to my home the odor was still strong in the air.

Description of Complaint:

My husband and I went to dinner on March 28, 2015 at Tonopah Family Restaurant aka Oscar's Place located at 41101 W Indian School Rd, Tonopah, AZ 85354. When we were done dining and exited the restaurant around 9 p.m. to get in our automobile to head home, the stench of chicken manure was so strong that my husband and I both had to cover our noses to get into the automobile and go home. If we hadn't, I feel we would have regurgitated the meal we had just eaten. This is a disgrace that a company can put an egg factory so close to a town, and destroy the enjoyment of the towns' residents of being able to go out and support our local business owners by dining in their establishment.

Type of Operation: Cafo - Commercial Animal Feeding C

County: Maricopa

Description of Complaint:

Over the weekend thousands of particles and feathers from Hickman's farm were raining over Tonopah. The smell is very bad also. I took a video which, due to the size of the pollution the camera did not pick up most of the feathers. Never the less it is obvious in the video that feathers are drifting over head. The larger feathers do show up. Like I said before the dust and feathers are coming from the barns and their ventilation fans. There needs to be a fix for this, some enforcement. If it is going to continue like this you need to let me know. ADEQ's logo is "Our mission is to protect and enhance public health and the environment" and I do not expect anything less. I have been feeling ill and this dander dust is probably to blame. Can you issue me a complaint # for this email, thank you

Description of Complaint:

Last Saturday, 3/28/15, there were feathers being blown around apparently from Hickmans Egg Factory. It is located next to me to the east so I am typically out of the prevailing winds from the facility. However, the fine "down" feathers were landing in my yard. A neighbor came over to help me with some work, and I was showing the feathers to him from my front entryway area. They were even floating in water containers that I keep filled for desert wildlife. We worked outside for several hours that afternoon. On Sunday (the next day), while I was at Church, I started to have a brief cough periodically. I started using Airborne lozenges I came home and sprayed myself and things down with Lysol, and gargled with mouthwash to try to head off whatever seemed to be happening. It continued to intensify. I started taking MucinexDM for it on Monday, and could not sleep Monday or Tuesday nights due to constant coughing. I continued spraying things with Lysol, and using the mouthwash, etc. but nothing seemed to help. I went outside of my front door on Tuesday and took photos of the "down" feathers in just that front area around the entryway and the water containers, and gathered the feathers up and put them in a baggy. Some feathers were so small I couldn't gather them. From coughing so much, my ribcage, chest, stomach, and back became so sore, I cringe when I have to cough again. I had a friend pick me up more MucinexDM and some cough syrup on Wednesday when in town. I have been pretty much in bed all week. I was to participate in an Easter program this coming Sunday at Church, but I called them yesterday and said I won't be able to be there on Sunday. I am still having respiratory problems. This is very unusual for me. I am not usually bothered by plant allergies, as some people are with the desert in bloom, so feel that this problem must be tied to the feathers, dander, or manure particles being airborne, and us breathing them.

Type of Operation: Cafo - Commercial Animal Feeding C

County: Maricopa

Description of Complaint:

I believe they are moving the feather piles. These photos shows how much dander dust is mixed in with the feathers. On a NORMAL day it is not as bad, but there is always dust coming out of the backside of these barns. Birds are naturally a dusty animal since they are always shedding skin along with their feathers. Dander dust is a health issue.

In these photos there is no obvious activity of any equipment moving or stirring the dander dust. There is just a mild wind blowing from the west/southwest stirring up the dander dust. I see this white dust drifting from the barn openings almost every afternoon.

I went into Buckeye to pick Matthew up at school yesterday. I had time to drive my car through the car wash and it looked nice. It was 3 pm when I drove my car to the car wash. This morning there was that "feather rain" again. Thousands of feathers drifting to the northwest. Along with the feathers comes the stench and dander. This is what my car looked like by 10 am this morning. Those white specks are dander, chicken skin. If I was to barbecue I assume I would not have to salt my steaks. I did not order this chicken delivery and I do not want it. I do not want Hickman's or any of their by-products on my property.

Description of Complaint:

It is well known that pathogens and other health risks can be attached to these dander particles. Not if, but when the H5N2 makes it out our way, and being in close contact, who is going to be responsible in the case of some of us getting sick? What if the virus mutates? The dander particle is a respiratory health risk just by it's self. Hickman's brought this concern into our community, but I guarantee that they would not step up to the plate to fix things if something was to go terribly wrong. It is already a wrong situation. If their birds get sick and die on the other hand it is a totally different story. Taxpayers would flip the bill to get Hickman's back on their feet

County: Maricopa

Description of Complaint:

I have lived in the west valley all my life. Dealt in agriculture since childhood. I was driving tractors since age 11. My father had a custom hay baling business and baled hay for farmers in Harquahala Valley, so I know agricultural dust. Harquahala is a dust bowl, but dust was from equipment moving earth like plows, land planing etc. It was not always dusty like Hickmans 24/7. Also layer CAFOs have only been recent and not common to Arizona ag.. I always suffered from dirt dust, but it was seasonal. Hickmans has this organic decaying dust 24/7 which should not be in the same category or classification as earth fugitive dust. Being decaying organic dust is more of a health risk. OSHA has regulations for poultry workers for this reason. The same consideration should be taken by ADEQ for health risks to innocent neighbors since they have no choice but to live under this growing nightmare. The smell comes first then the sore throats, itchy skin, irritated eyes, drying of nasal passages and headaches. Since Hickmans moved in I find myself staying indoors, can not barbecue, did not set up our giant above ground pool due to what happened last summer with hundreds of drowning flies and Hickman debris filling the pool. Due to the stench and ill affects I have let my weeds grow because I can not stand being outside most days. Chickens are naturally dusty animals, shedding skin constantly. Combining millions of these animals and adding that Arizona has a dry arid climate compounds the problem. Particulates from such an operation in these conditions will travel for miles. What I have found is that the particulates are the source of the smell,so if you smell it you are breathing it. These particles have been know to carry pathogens,etc.. You can not deny it is a very unhealthy environment.

Description of Complaint:

Here is one of the main problems. The older barns at the Arlington farm have the exhaust fans on one end which is an exterior wall. The bird poop drops below into the basement. The barns at the Tonopah facility have the exhaust fans built into the dividing wall. This dividing wall separates the chicken's living quarters and the manure room. The new barns also have conveyor belts that collect the chicken waste; poop, feathers, dander and maybe dead chickens. The belts direct the waste up to the ceiling of the 30 to 40 foot manure room and then, I believe, another belt takes the waste to the selected dropping point. As you can see in the video or pictures of these barns they end up with several piles of waste on the manure room floor. I do not know how often these belts are in service, but as they drop the waste downwards the exhaust fans are blowing outwards through the free falling waste. So not only are they exhausting the dander from the living quarters, but are dispersing the waste fines as the exhausted air travels through the dropping waste. I could take videos forever, but they would look just like the one I am sending you. During most days there is enough of a breeze to disperse the exhausted air to where it looks like a fine white haze. In the quiet mornings or afternoons when the wind flow is at an almost standstill is when you can see this dust cloud which resembles "fog". You are lucky if it is not drifting your way. It has been drifting east into the little town of Tonopah. When I head over into town as I near the haze is when I start smelling that awful stench. Late last night I was not so lucky, there was a breeze in my direction.

Description of Complaint:

I reach out to you in hope that you are able to resolve a serious health risk to myself, residents and the visitors of Tonopah AZ.

The dust, chicken dander and fine particulates that are being emitted and spewed across our properties and businesses from this facility is spreading pathogens and other harmful bacteria through the air we breath. The amount of just DUST (assuming dust and the other particulates are different) from construction on the property is alone troubling and way above what it should be.

I am sure you are receiving a high number of complaints about this issue.

Which should only prove the legitimacy and seriousness of the health risk concerns as a whole.

Action is required and accountability needs to be applied...not pacified but resolved

Description of Complaint:

I just put a complaint on the air quality violation and now its dust in the air that I can not breath from their plant, You could see it floating in the air, I have stage-4 cancer and was told that I should not breath stench in the air from the egg farm. It smelly like Smelly Sox, Manure, Nauseating fecal matter. I moved out here to get away from the pollution in town and now I don't like the smell from the plant, I had to put my shirt over my nose so I could open my gate and get in my vehicle to go to the store. I am going to check with my doctor, but I know that's not good for me to breath at all, I like going out side to water my trees and with the stench in the air, I can know longer enjoy the out side any more. I am not aloud around sick people, I had to take one of my nausea pills this morning just from the smell so that way I could keep my breakfast down. It's bad when I have to take one of them before my treatment even has started. Which will be this coming Wednesday.

egg factory

County: Maricopa

Description of Complaint:

On Sept 30th at 5:30 p.m. I visited the Saddle Mountain RV Park located at 40902 W. Osborn Road. The stench from the Hickman egg factory was obnoxious and offensive and smelled like wet manure. This stench was still present when I left at 9:00 p.m. The entrance to the door of the building also had a cluster of chicken feathers caught up in the cobwebs. This horrible stench is a direct violation of Hickman's Air Permit to Operate #140062 which specifically states they shall not emit gaseous or obnoxious contaminants... this also includes manure stench. They are in violation of this permit !! It also violates Maricopa County State Implementation Plan Regulation 3 Rule 32 for Odors and Gaseous Emissions. By turning your heads to this issue you are denying us the enjoyment of our property, the ability to recreate, to enjoy an evening at the local restaurant, not to mention the horrible public health issues this contaminating air and dander is causing. I am also sending a copy of this complaint to the MC air quality because, besides the violation of the dander and feathers, it deals with the horrible stench. The State continues to turn it's head to the Hickman's obvious violations of all air quality issues... including dander, feathers and flies.

Date of Occurrence: 09/30/15 **Substance Involved:** feathers - dander

Description of Complaint:

Sept 22 My husband is recuperating from surgery and we decided to sit outside for some fresh air and enjoy the evening sky (about 6pm). The breeze was blowing from the east, and shortly after getting seated, we noticed the horrible odor of the poultry factory which is over 2 1/2 miles away. If we are smelling this stink almost 3 miles UPWIND, just imagine what the homes located nearby are having to deal with. !! The Hickman 1/2s are violating their Air Permit #140062 which specifically states they shall not emit gaseous or obnoxious contaminants (including the stench of manure). The Hickman 1/2s have invaded our community and have taken away our rights as property owners. We can no longer sit outside to enjoy the stars, we can not enjoy a fly-free, odor-free meal at the local restaurant, and even the businesses nearby are receiving complaints from their customers. Our business area is suffering, and the families living nearby are dealing with bloody noses, headaches, breathing issues, and itchy skin. WHERE ARE OUR RIGHTS??? The County has the duty to protect our health and safety 1/2. This is NOT being done, and my opinion is that it is because of the influence the Hickman have with the government. May I also comment that Clint Hickman is our Board of Supervisor representative? He is NO help.

Type of Operation: Cafo - Commercial Animal Feeding C

Major Cross Streets:

County: Maricopa

Description of Complaint:

I have been doing research on the design of Hickman's barns. This photo is the closest barn I could find that resembles Hickman's barn design. It appears that it is a lot more environmentally friendly. If you notice the ventilation fans are along the side of the chicken barn therefore there is no forced air blowing into the manure room. The manure room is enclosed with ventilation on the upper side walls, not open ended like the Hickman barns. Unlike Hickman's barns this one even has all of the conveyance equipment covered to minimize dust emissions. When it comes to cafo barn designs what oversight is in place to make sure these barns function properly and minimize their impact to the environment? Hickman's barns, like this one, are two building in one, unlike this one, Hickman's fans have two purposes, one; ventilation for the chickens ,two; "extended" air drying the manure. Clint Hickman calls his barns "wind tunnels". Hickman's design includes the manure room as part of the "wind tunnel". Who in their right mind would consider this design to be acceptable? Who would not figure out that if you place manure piles right in front of large ventilation fans discharging forced air in a wind tunnel fashion that the forced air is not going to disperse the particulate fines right out into the neighboring atmosphere? During my research, so far, I have not found any other cafo that does this. I believe that they need immediate corrective action on this. Also, I believe these manure rooms, as currently designed, are of an industrial nature, not agricultural. They are purposely designed in this fashion to have extended aeration for drying the manure as part of their industrial fertilizer processing. Please consider this a formal complaint.

Description of Complaint:

Continuous drift of dander and feathers. It is hard to see, but you can smell the stench. If you look towards the sun light the particulates and feathers light up in abundance. I have worked around dusty conditions before. This reminds me of how I would get sick being around a cotton gin. I can feel that cool feeling under the eyes which is dust settling on my skin. My nose gets stuffy leading to the current headache and feeling nauseous. The lint type feathers make my skin itch. There are chores I need to get done outside, but have to go indoors due to feeling sick.

Description of Complaint:

So much for Hickman's engineering. Those half aprons on the open end of their manure rooms only force the exhaust fan air through a smaller opening, creating accelerated wind flow. Not only that, the forced air is drawn closer to the manure piles. I currently have the stench along with that itchy dust that plugs up my nose, makes my skin and eyes itch. I see that the Hickman design of having the combination of the chicken barn and manure room divided by the exhaust fans together are still being built. I still say this type of design should be outlawed. Simply unsustainable.

Major Cross Streets:

Hickmans Egg Farm
411th Avenue
411th x Indian School Rd
Tonopah
Egg Production Plant

County: Maricopa

Description of Complaint:

While traveling east on Indian School Road on 10/4/2014 at 9:30am, a covered semi-trailer pulled out in front of me from the Hickman's Desert Pride Egg Production Plant. While following behind this truck, although our speed never went above 45 mph, feathers, dust, and larger particles (assuming manure) were flying out from under the cover. This release was a constant occurrence during the trip to the corner of 411th and Indian School, where the truck then turned right, and I turned left.

Date of Occurrence: 10/03/14 Substance Involved: Feathers Manure Dust

Quantity of Substance: Unknown Medium Affected: Unknown
